

LETTER OF MOTIVATION

Dear Admission Committee,

I am writing this letter to express my strong interest in joining the Master's in **Data Analytics** at **University of Hildesheim**, aligning perfectly with my academic interests and professional aspirations. The Master's programme in Data Analytics at the **University of Hildesheim** particularly appeals to me because of its strong combination of statistical analysis, machine learning, data management, and practical research. I am especially attracted to the opportunity to learn from experienced faculty members while collaborating with students from diverse academic and cultural backgrounds. Through this program, I can develop the right set of skills, exposure, and up-to-date knowledge to both shine and contribute exclusively to this particular academic domain.

My current academic qualification is a Bachelor of Science in "**Electrical, Electronic and Communication Engineering**" at **Military Institute of Science & Technology, Bangladesh**. It is one of the best universities in Bangladesh, which is governed by **Bangladesh University of Professionals**. It was during my level two that I truly started to like and realized where lies my passion. The subject was **Computer Programming**, mainly **Python**. I performed well in both theoretical and practical subject. From then onwards, alongside my regular academic activities, I continued to learn deeper in this field. This interest eventually led me to conduct my undergraduate thesis on a Python-based project titled "**Camera Surveillance System using Raspberry Pi Camera**."

As I was also serving in military as an officer, I selected the corps of "**Electrical and Mechanical Engineering**", so that I can further my expertise on this field. In 2023, I completed a foreign course on "**Bayraktar UAV TB2: Avionics Engineer**" from Turkiye, where I came across working with more sophisticated drone technology. In the meantime, I continued solidifying relevant basic data science related knowledge by undertaking courses on **Machine Learning, Database Management and SQL** etc from Internationally recognized platforms like Udemy, Coursera, CS50. Also in my unit, I developed data-driven tracking and forecasting systems using **Google Sheets** to monitor flight hours, fuel consumption, and maintenance requirements. These tools enabled the generation of monthly flight forecasts and annual spare-parts demand projections for reporting to higher authorities. Besides these, I wanted to be more practical, thus I landed in **Upwork** and started to work with real-time clients. Through Upwork, I have completed over 40 projects and worked with clients from multiple countries, working in various degree as Data Analyst, Website tracking and Data Visualization expert. Last year, I confirmed that my real talent lies in the technical world and even extreme level of exhaustion here leaves me enjoying the process. As a result, I decided to end my military career and pursue higher level education in technical field. Over time, I developed a strong passion for data analysis and the process of discovering the underlying insights and resonate those with real world problems and my military job has taught me how to work with diverse people, handle deadlines, and multitask.

Germany's international acclaim in delivering excellent academic opportunities, bringing innovation to IT, and emphasizing that students should learn through actual research make it the ideal destination for my postgraduate education in Data Analytics. I am particularly attracted to the interdisciplinary approach and industry collaborations offered by German universities. Additionally, motivating factors in my decision include the country's strong economy, emphasis on sustainability, and the presence of a vibrant international student community. After earning my master's degree, I aim to work as a Data Analyst specializing in artificial intelligence and machine learning. I hope to develop data-driven solutions that improve decision-making and operational efficiency across industries. In the long term, I aspire to lead innovative AI projects and contribute to the technological development of my country.

I believe that the MSc programme at the **University of Hildesheim** is the perfect stepping-stone for an aspiring person like me. It will help me to enhance my expertise in the technical field to the fullest capacity. My standard academic performance, exploration in the field of data, and relevant practical experience have shaped me to be a good fit for the programme here. Through this opportunity, I want to become a better Data Analyst who is fully equipped to contribute to the technological enhancement of my country.

Thank you for your time and consideration.

Yours Sincerely,

Md Kamrul Hassan Robin
